Education

The Ohio State University

2024

Ph.D., Public Policy Analysis | Graduate Minor in Economics

Dissertation: “Three essays on the economic consequences of chronic illness”

Specialties: Health economics, financial toxicity, social determinants of health, causal inference

Miami University

2019

M.A., Economics

University of Michigan

2016

B.S., Economics

Experience

Flatiron Health

Durham, North Carolina

Research Scientist, Statistical Programming

2025–present

- Lead statistical programmer across 5–8 concurrent studies (25+ total since joining Flatiron), translating analytic specifications from statistical analysis plans and protocols into R code to generate analytic datasets, descriptive and inferential statistics, and data visualizations — often involving novel variables, complex statistical methods, and non-standard RWE implementation.
- Manage a team of three statistical programmers (two India-based, one US-based); serve as hiring manager for permanent US-based position. Oversee workflow allocation, code review, and serve as point of contact for areas of methodological or implementation uncertainty. Coordinate with external managers on programmer capacity when working with non-direct reports.
- Subject matter expert (SME) on the Flatiron Health Research Database (FHRD) for Bladder Panoramic and SEER data; secondary SME for Breast Panoramic and NSCLC Panoramic datasets. Consult cross-functionally on data model nuances and appropriate use of Flatiron data modalities, including EHR-derived RWD, clinico-genomics, ML-extracted, and claims data.
- Collaborate daily with internal clinicians, epidemiologists, biostatisticians, and medical directors across study teams; engage directly with external pharmaceutical and biotech clients on client-sponsored research, serving as a technical point of contact for study implementation and data questions.
- Engage early in study lifecycle — reviewing protocols, table shells, and timelines in advance of programming — to ensure implementation clarity and identify methodological or data challenges before they arise.
- Serve as validation programmer on double-coding projects to ensure high-quality output; manage reconciliation between two independent programmers.
- Lead initiative to incorporate statistical programming guidance into table shells via an AI agent, including personally collecting and contributing guidance documentation from across Research Sciences.

- Contribute to team coding library reflecting table shell standardization, reducing redundant logic development across the programming team and improving efficiency and consistency of study delivery.
- Implement AI-assisted workflows for table shell generation, code review, and output quality control, contributing to continuous improvement of Flatiron's analytical tooling and programming standards.
- Team received 1st place in the Flatiron@Scale category of the 2025 company-wide hackathon for *Real-World Utilization of ctDNA and Its Impact on Bladder Cancer Management*.
- Apply solid working knowledge of oncology treatment paradigms, tumor biology, and cancer epidemiology across multiple tumor types to inform analytic decisions and contribute meaningfully to scientific discussions with clinical colleagues.
- Co-Lead, Parent Employee Resource Group (ERG); manage \$10,000 budget and lead planning for Take Your Kid to Work Day (100+ employees); participate in leadership development programming including training in change management and organizational leadership.

Collaborative for Financial Equity and Inclusion, The Ohio State University Columbus, Ohio

Post Doctoral Researcher & Adjutant Lecturer

2024–2025

- Lead analyst on large interdisciplinary team of PhDs, MDs, and Biostatisticians across 10+ projects focused on health economics. One project featured in [USA Today](#) and named [Top Retirement Research Paper of 2023](#).
- Utilize latest econometric and statistical techniques to analyze EHR from multiple hospital systems and Cancer Registry data, including difference-in-differences, regression discontinuity, instrumental variables, and synthetic controls.
- Led management of the team's 17 TB of data on the Ohio Supercomputer, including secure data transfer via SFTP to/from hospital systems and state agencies using STATA, R, SQL, and Linux.
- Taught a 4000-level Decision Making course as instructor of record to approximately 20 juniors and seniors.

John Glenn College of Public Affairs, The Ohio State University

Columbus, Ohio

Doctoral Student Researcher

2019–2024

- Lead research assistant to multiple faculty members across departments of Public Policy, Economics, and Sociology.
- Trained and mentored approximately fifteen analysts in data management, efficient coding, and data visualization, including writing a technical assessment for employment in the lab.
- Individually obtained [\\$15,000 in grant funding](#) from the National Bureau of Economic Research, completed dissertation, published numerous academic articles, and presented at national conferences.
- Received University Fellowship in Year 1. Nominated by department for Presidential Fellowship in Year 5.

Cardinal Health, Inc.

Dublin, Ohio

Advanced Analytics Rotational Program

2016–2018

- *Sales Analytics*: Lead analyst on territory rebalancing project using volume, sales performance, and geospatial data — awarded Best Advanced Analytics Project in 2017 company-wide. Also provided nearest neighbor benchmarking for multiple Health Networks using CMS data.
- *Strategic Pricing*: Data analyst for specialty drugs and biosimilars pricing at one of the three largest pharmaceutical distributors in the USA (\$200B+ annual revenue); implemented SAS automation for pricing decisions.

- Moulton, S., Brown, M., Haurin, D., Loibl, C., and **Pesavento, M.** Economic security of older adults after the death of a partner: evidence from credit data. Featured in [USA Today](#); named [Top Retirement Research Paper of 2023](#).
- Loibl, C., Drost, M., Campbell, Z., Moulton, S., Haurin, D., **Pesavento, M.**, Hyer, M., Einstadter, D., Perzynski, A.T., and Joseph, J.J. Credit scores, credit risk profiles, and glycemic control among patients with type 2 diabetes.
- **Pesavento, M.** The effects of type II diabetes on financial distress and labor supply: evidence from administrative data.

- **Pesavento, M.** The effects of household cancer diagnosis on investment in higher education. *Funded by NBER and Sloan Foundation.*
- **Pesavento, M.** The impact of household cancer diagnosis on the labor supply of young adults. *Funded by NBER and Sloan Foundation.*
- Chanda, T., Collins, M., Moulton, S., **Pesavento, M.**, and Rhodes, A. Mind the gap: state reductions in unemployment insurance and credit use among vulnerable households.
- **Pesavento, M.**, Dormady, N., and Greenbaum, R. Moderating the effects of advising characteristics: evidence from a controlled experiment.

In Preparation

- **Pesavento, M.**, Maltz, R., and Moulton, S. The impact of chronic health shocks in children on household labor supply and financial distress.
- Moulton, S., Padamsee, T., Loibl, C., Brown, M., Haurin, D., and **Pesavento, M.** Credit disparities in widowhood by race and gender.

Invited Presentations

Case Western Reserve and MetroHealth System Grand Rounds April 2025
The association of financial resources and diabetes control: Evidence from administrative data

Association of Public Policy and Management November 2024
The effects of parental cancer diagnosis on the higher educational outcomes of young adults

SSA Retirement and Disability Research Consortium August 2024
Racial disparities in older adults' economic security when experiencing chronic health conditions: insights from electronic health records, wage earnings, and credit data

Ohio State University Applied Microeconomics Lunch April 2024
The effects of household cancer diagnosis on investment in higher education

BGSU & OSU Graduate Conference October 2021
Corked wine: the impact of direct to consumer shipping laws on the size distribution of wineries

Association of Public Policy and Management November 2019
Explaining resilience actions under repeated disasters: evidence from a controlled experiment

Awards and Grants

Flatiron Health
 Hackathon 36, 1st Place — Flatiron@Scale Category 2025
Real-World Utilization of ctDNA and Its Impact on Bladder Cancer Management

National Bureau of Economic Research
 Household Finance Small Grant [\$15,000] 2023

The Ohio State University Graduate School
 University Fellowship 2019

Cardinal Health

Best Advanced Analytics Project, Company-Wide
Sales Territory Optimization

2016

Teaching

Instructor of Record

PUBAFRS 4010: Decision Making

AU 2024

Service

Flatiron Health

Parent Employee Resource Group, Co-Lead

2025–2026

The Ohio State University

Doctoral Student Representative to College Faculty and Staff Meetings

2023–2024

PhD Conference on Real Estate and Housing, Student Co-Chair

2019–2022

Technical Skills

Programming Languages

Expert: R, STATA

Proficient: Python, Tableau, SAS, Alteryx

Familiar: Matlab, ArcGIS, L^AT_EX

Statistical & Econometric Methods

Causal inference: Difference-in-differences (+ event study), regression discontinuity, instrumental variables, synthetic controls, methods in propensity matching

Survival & epidemiological: Cox proportional hazards (+ weighted Cox), Kaplan-Meier, competing risks, propensity score methods (matching, IPTW)

General: Linear and logistic regression, two-part models, panel data methods, data visualization

Real-World Data & Datasets

EHR-derived real-world data (Flatiron OncoEMR, Epic), clinico-genomics data, ML-extracted data, claims data, Experian consumer credit data, Ohio Cancer Registry (OCISS), UI Claims and Wages (Ohio DJFS), Higher Education Information System (Ohio DoHE)

Computing & Data Infrastructure

Ohio Supercomputer Center, secure data transfer (SFTP), Linux, SQL, 17 TB data pipeline management

AI & Automation

Routine integration of large language models (LLMs) for code generation, code review, and debugging in R through Positron and proprietary Credal Agents; development of AI agents to automate manual analytical workflows and improve team productivity
